

Configuration

Optimized for M2, Peakto requires macOS 11 (Big Sur) or later. Peakto is compatible with the latest macOS version, Sonoma.

Peakto is compatible with:

- Aperture catalogs from version 3.6
- Lightroom Classic catalogs from version 5
- Lightroom Creative Cloud (current version)
- Luminar Neo catalogs from version 1.0
- Capture One catalogs from version 20
- Apple Photos catalogs from version 6 (Big Sur)
- iView Media Pro catalogs from version 3
- Pixelmator Pro catalogs from version 3
- DXO PhotoLab 4 & PureRAW 2
- ON1 Photo RAW 2023 and 2022
- Instagram accounts

Peakto requires 2GB of free space, 4GB of memory (8GB recommended) and enough space to accommodate the Peakto library and database files. Peakto files can be located on external drives. A fast (SSD) drive for Peakto files is recommended.

A working copy of the supported apps (Apple Aperture, Lightroom, Capture One, iView Media Pro...) is not required when using Peakto, as Peakto opens those libraries natively.
