

## Configuration

Optimized for M1, Peakto requires macOS 11 (Big Sur) or later. Peakto is compatible with the latest macOS version, Ventura.

Peakto is compatible with:

- Aperture catalogs from version 3.6
- Lightroom Classic catalogs from version 5
- Luminar catalogs from version 4.2
- Luminar AI catalogs from version 1.0
- Capture One catalogs from version 20
- Apple Photos catalogs from version 6 (Big Sur)
- iView Media Pro catalogs from version 3

Peakto requires 2GB of free space, 4GB of memory (8GB recommended) and enough space to accommodate the Peakto library and database files. Peakto files can be located on external drives. A fast (SSD) drive for Peakto files is recommended.

A working copy of the supported apps (Apple Aperture, Lightroom, Capture One, iView Media Pro...) is not required when using Peakto, as Peakto opens those libraries natively.
